

Riddle: You're in a forest. There are 4 exits (North, South, East and West). In the north, there is a black hole waiting to swallow you up. In the west, there is a hole in the ground too big for you to cross, even by rope. In the south, there are 3 hungry lions that haven't eaten for 3 months that are waiting to eat you. In the east, there is a giant stone slab that is too high to climb and it takes up the whole space. Which way do you go to escape?
